Discrete mathematics is the study of mathematical structures that are discrete rather than continuous. In contrast to real numbers that vary "smoothly", discrete mathematics studies objects such as integers, graphs, and statements in logic. These objects do not vary smoothly, but have distinct, separated values. Discrete mathematics therefore excludes topics in "continuous mathematics" such as ...

The class of Sudoku puzzles consists of a partially completed row-column grid of cells partitioned into  $N$  regions each of size  $N$  cells, to be filled in ("solved") using a prescribed set of  $N$  distinct symbols (typically the numbers  $\{1, \dots, N\}$ ), so that each row, column and region contains exactly one of each element of the set. The properties of Sudoku puzzles and their solutions can be ...

In the mathematics of the real numbers, the logarithm  $\log_b a$  is a number  $x$  such that  $b^x = a$ , for given numbers  $a$  and  $b$ . Analogously, in any group  $G$ , powers  $b^k$  can be defined for all integers  $k$ , and the discrete logarithm  $\log_b a$  is an integer  $k$  such that  $b^k = a$ . Discrete logarithms are quickly computable in a few special cases. However, no efficient method is known for computing them in ...
